Deer Game

June 05, 2018

Product Overview

Deer Game is an incremental game currently based in javascript and html. It is set in the same universe as and is creatively influenced by popular clicker *Kittensgame* by *bloodrizer*. However, Deer Game has its own distinct mechanics and storyline. Deer Game is made by me, Noah Wright, in my freetime this summer.

Purpose

I hope to be able to use the donations to pay myself 10\$/hour for my time spent coding. Right now I plan on working 3 jobs this summer to raise money for tuition. Cost of attendance at Baylor University is \$60,000 annually and my annual scholarship is \$42,000. Ideally, this game will take off and I will not need to work throughout my college career.

Background

I got my first job on the day I turned 14. I worked in that coffeehouse for the following three years while managing my freshman through junior years of high school. During my junior year, I went to community college for dual-credit college classes. After that year I got a job at a Law Firm as an office worker and a job at a Wealth Management firm as an understudy. I am going to Baylor this fall to pursue a Finance degree, expecting to graduate with high honors.

Accountability

My progress will be tracked through github and I intend to create a donation tracker and reward system as the game picks up steam

Details

I'd like to work with /r/incremental_games in the development of this game. In the gig-economy we live in, temporary income streams are a large sector of our jobs. Ideally, we could crowdfund the time I spend on this game through the subreddit as the "Sponsored Game" in development. In exchange I could offer nonbinding creative direction from the subreddit (I love feedback and idea generation, this is what large numbers of people do very well). I believe that this will be a great game one day, I just need your help.

Even before the income, I will continue pouring hours upon hours of work into this project, it's my passion and my dream.
